Errata to Physical Characteristics of the Site

1.1 Wind Roses

An inherent flaw in the software function that produced wind roses for the South African Report on Physical Characteristics has been identified. This flaw resulted in a flip in the East-West plane for all wind roses that were provided. The following should be considered as information that supercedes the relevant information provided in the report on Physical Characteristics of the Site, as submitted on the 15th September 2011.

1. **Figure replacement**

   Figure 5.13, which is a wind rose for the period 01/01/2005 to 31/03/2011, should be replaced by the following Figure:

![Figure 5.13: Wind rose for all wind speed data, in units of m/s, collected in the period 01/01/2005 to 31/03/2011.](image)

2. **Annexure replacement**

   Annexure F10, which contains monthly wind roses, should be replaced by the new set of monthly wind roses attached to this errata.
